

**THE DATASHEET OF  
NFL21SP106X1C3D**

# Reference Only

## Chip EMIFIL LC Combined Monolithic NFL21SP□□□X1C□□ Reference Specification

### 1. Scope

This reference specification applies to Chip EMIFIL LC Combined Monolithic Type NFL21S Series.

### 2. Part Numbering

NF	L	21	SP	106	X	1C	3	D
Product ID	Structure	Dimension (L×W)	Features	Cut-off Frequency	Characteristics	Rated Voltage	Electrode (3,7 : Sn plating)	Packaging Code (D : Taping / B : Bulk)

### 3. Rating

Customer Part Number	MURATA Part Number	Cut-off Frequency [MHz]	Capacitance [pF]	Inductance (L) [nH]	DC Resistance [Ω max.]	Rated Current [mA(DC)]	Insulation Resistance [MΩ min.]	Rated Voltage [V(DC)]	Withstanding Voltage [V(DC)]
	NFL21SP106X1C3D	10	670±20%	680±20%	8.5	100	1000	16	50
	NFL21SP106X1C3B								
	NFL21SP206X1C7D	20	240±20%	700±20%	3.5	150			
	NFL21SP206X1C7B								
	NFL21SP506X1C3D	50	84±20%	305±20%	3.0				
	NFL21SP506X1C3B								
	NFL21SP706X1C3D	70	76±20%	185±20%	2.0				
	NFL21SP706X1C3B								
	NFL21SP107X1C3D	100	44±20%	135±20%	1.5				
	NFL21SP107X1C3B								
	NFL21SP157X1C3D	150	28±20%	128±20%	1.2				
	NFL21SP157X1C3B								
	NFL21SP207X1C3D	200	22±20%	72±20%	300				
	NFL21SP207X1C3B								
	NFL21SP307X1C3D	300	19±10%	45±10%					
	NFL21SP307X1C3B								
	NFL21SP407X1C3D	400	16±10%	34±10%					
	NFL21SP407X1C3B								
	NFL21SP507X1C3D	500	12±10%	31±10%					
	NFL21SP507X1C3B								

- Operating Temperature : -55°C to +125°C (Includes self-heating.)
- Storage Temperature : -55°C to +125°C

### 4. Standard Testing Condition

< Unless otherwise specified >

Temperature : Ordinary Temp. / 15 °C to 35 °C  
Humidity: Ordinary Humidity / 25 %(RH) to 85 %(RH)

< In case of doubt >

Temperature: 20 °C ± 2 °C  
Humidity : 60 %(RH) to 70 %(RH)  
Atmospheric pressure: 86 kPa to 106 kPa

### 5. Style and Dimensions

#### ■ Equivalent Circuit

\* No Polarity

■ Unit Mass (Typical value)  
0.009g

# Reference Only

Spec. No. JENF243D-0006L-01

P 2 / 8

■ Insertion Loss Characteristics (I.L.) (Typ.)

**6. Marking**

No marking

**7. Electrical Performance**

No.	Item	Specification	Test Method
7.1	Capacitance (Cap.)	Meet item 3.	<ul style="list-style-type: none"> <li>Frequency : 1±0.1MHz</li> <li>Voltage : 1±0.2V(rms)</li> </ul>
7.2	Inductance (L)		<ul style="list-style-type: none"> <li>Frequency</li> <li>Cut-off Frequency 20~500MHz : 10±1MHz</li> <li>Cut-off Frequency 10MHz : 1±0.1MHz</li> <li>Voltage : 1±0.2V(rms)</li> </ul>
7.3	DC Resistance (Rdc)		Measured with 10mA max.
7.4	Insulation Resistance(I.R.)		Measured between terminal (1)-(3). (ref. Item5)
7.5	Withstanding Voltage		Products shall not be damaged.

**8. Mechanical Performance**

No.	Item	Specification	Test Method								
8.1	Appearance and Dimensions	Meet item 5.	Visual Inspection and measured with Slide Calipers.								
8.2	Solderability	Electrodes shall be at least 90% covered with new solder coating.	<ul style="list-style-type: none"> <li>Flux : Ethanol solution of rosin, 25(wt)%</li> <li>Pre-heat : 150 ± 10°C, 60 to 90s</li> <li>Solder : Sn-3.0Ag-0.5Cu</li> <li>Solder Temperature : 240 ± 3°C</li> <li>Immersion Time : 3±1 s</li> <li>Immersion and emersion rates : 25mm / s</li> </ul>								
8.3	Resistance to soldering heat	Meet Table 1. Table 1 <table border="1" style="margin-left: 20px;"> <tr> <td>Appearance</td> <td>No damaged</td> </tr> <tr> <td>Cap. Change</td> <td>within ± 5%</td> </tr> <tr> <td>L Change</td> <td>within ± 5%</td> </tr> <tr> <td>I.R.</td> <td>meet item 3</td> </tr> </table>	Appearance	No damaged	Cap. Change	within ± 5%	L Change	within ± 5%	I.R.	meet item 3	<ul style="list-style-type: none"> <li>Flux : Ethanol solution of rosin, 25(wt)%</li> <li>Pre-heat : 150 ± 10°C, 60 to 90s</li> <li>Solder : Sn-3.0Ag-0.5Cu</li> <li>Solder Temperature : 270 ± 5°C</li> <li>Immersion Time : 10 ± 1 s</li> <li>Immersion and emersion rates : 25mm / s</li> <li>Then measured after exposure in the room condition for 24±2 hours.</li> </ul>
Appearance	No damaged										
Cap. Change	within ± 5%										
L Change	within ± 5%										
I.R.	meet item 3										

# Reference Only

No.	Item	Specification	Test Method				
8.4	Bending Strength	Meet Table 2.  Table 2 <table border="1" style="margin-left: 20px; border-collapse: collapse;"> <tr> <td style="padding: 2px;">Appearance</td> <td style="padding: 2px;">No damaged</td> </tr> <tr> <td style="padding: 2px;">Cap. Change</td> <td style="padding: 2px;">within <math>\pm 5\%</math></td> </tr> </table>	Appearance	No damaged	Cap. Change	within $\pm 5\%$	It shall be soldered on the glass-epoxy substrate (t = 1.0mm). • Deflection : 2 mm • Keeping Time : 30 s  
Appearance	No damaged						
Cap. Change	within $\pm 5\%$						
8.5	Drop	Products shall be no failure after tested.	It shall be dropped on concrete or steel board. • Method : Free fall • Height : 75 cm • Attitude from which the product is dropped : 3 directions • The Number of Time : 3 times for each direction (Total 9 times)				
8.6	Bonding Strength	The electrodes shall be no failure after tested.	It shall be soldered on the glass-epoxy substrate. • Applying Force (F) : 9.8 N • Applying Time : 30 s  				
8.7	Vibration	Meet Table 1.	It shall be soldered on the glass-epoxy substrate. • Oscillation Frequency : 10 to 55Hz for 1 minute • Double Amplitude : 1.5 mm • Time : A period of 2 hours in each of 3 mutually perpendicular directions. (Total 6 hours)				

## 9. Environment Performance

It shall be soldered on the glass-epoxy substrate.

No.	Item	Specification	Test Method
9.1	Temperature Cycling	Meet Table 1.	• 1 Cycle 1 step: $-55 \pm 0_3 \text{ } ^\circ\text{C} / 30 \pm 3_0 \text{ min}$ 2 step: Room Temperature / within 3 min 3 step: $+125 \pm 3_0 \text{ } ^\circ\text{C} / 30 \pm 3_0 \text{ min}$ 4 step: Room Temperature / within 3 min • Total of 10 cycles • Then measured after exposure in the room condition for 24 $\pm$ 2 hours.
9.2	Humidity		• Temperature : $40 \pm 2 \text{ } ^\circ\text{C}$ • Humidity : 90 to 95%(RH) • Time : 500 $\pm 2_0$ hours • Then measured after exposure in the room condition for 24 $\pm$ 2 hours.
9.3	Heat Life		• Temperature : $125 \pm 2 \text{ } ^\circ\text{C}$ • Test Voltage : Rated Voltage $\times 200\%$ • Charge Current : 50 mA max. • Time : 1000 $\pm 48_0$ hours • Then measured after exposure in the room condition for 24 $\pm$ 2 hours.

# Reference Only

### 13. Notice

Products can only be soldered with reflow.  
 This product is designed for solder mounting.  
 Please consult us in advance for applying other mounting method such as conductive adhesive.

#### 13.1. Flux and Solder

Flux	Use rosin-based flux, Do not use highly acidic flux (with chlorine content exceeding 0.2(wt)%). Do not use water-soluble flux.
Solder	Use Sn-3.0Ag-0.5Cu solder

Other flux (except above) Please contact us for details, then use.

#### 13.2. Note for Assembling < Thermal Shock >

Pre-heating should be in such a way that the temperature difference between solder and products surface is limited to 100°C max. Also cooling into solvent after soldering should be in such a way that the temperature difference is limited to 100°C max.

#### 13.3. Attention Regarding P.C.B. Bending

The following shall be considered when designing P.C.B.'s and laying out products.

- (1) P.C.B. shall be designed so that products are not subject to the mechanical stress for board warpage.  
 [Products direction]

Products shall be located in the sideways direction (Length:a < b) to the mechanical stress.

- (2) Components location on P.C.B. separation.

It is effective to implement the following measures, to reduce stress in separating the board.

It is best to implement all of the following three measures; however, implement as many measures as possible to reduce stress.

Contents of Measures	Stress Level
(1) Turn the mounting direction of the component parallel to the board separation surface.	A > D *1
(2) Add slits in the board separation part.	A > B
(3) Keep the mounting position of the component away from the board separation surface.	A > C

\*1 A > D is valid when stress is added vertically to the perforation as with Hand Separation. If a Cutting Disc is used, stress will be diagonal to the PCB, therefore A > D is invalid.

- (3) Mounting Components Near Screw Holes

When a component is mounted near a screw hole, it may be affected by the board deflection that occurs during the tightening of the screw. Mount the component in a position as far away from the screw holes as possible.

#### 13.4. Pre-heating Temperature

Soldering shall be handled so that the difference between pre-heating temperature and solder temperature shall be limited to 100°C max. to avoid the heat stress for the products.

# Reference Only

### 13.5. Reflow Soldering

#### 1) Soldering paste printing for reflow

- Standard thickness of solder paste: 100µm to 150µm.
- Use the solder paste printing pattern of the right pattern.
- For the resist and copper foil pattern, use standard land dimensions.

- Standard printing pattern of solder paste.

#### 2) Soldering Conditions

Standard soldering profile and the limit soldering profile is as follows.

The excessive limit soldering conditions may cause leaching of the electrode and / or resulting in the deterioration of product quality.

	Standard Profile	Limit Profile
Pre-heating	150°C ~ 180°C , 90s ± 30s	
Heating	above 220°C , 30s ~ 60s	above 230°C , 60s max.
Peak temperature	245°C ± 3°C	260°C , 10s
Cycle of reflow	2 times	2 times

### 13.6. Reworking with Soldering iron

The following conditions shall be strictly followed when using a soldering iron.

- Pre-heating : 150°C, 1 min
- Soldering iron output : 30W max.
- Tip temperature : 350°C max.
- Tip diameter : φ 3mm max.
- Soldering time : 3(+1,-0) s
- Times : 2times max.

Note: Do not directly touch the products with the tip of the soldering iron in order to prevent the crack on the ceramic material due to the thermal shock.

### 13.7. Solder Volume

Solder shall be used not to be exceeded as shown below.

Accordingly increasing the solder volume, the mechanical stress to product is also increased. Excessive solder volume may cause the failure of mechanical or electrical performance.

# Reference Only

Spec. No. JENF243D-0006L-01

P 8 / 8

## 13.8. Cleaning Conditions

Products shall be cleaned on the following conditions.

- (1) Cleaning temperature shall be limited to 60°C max. (40°C max. for Isopropyl alcohol (IPA))
- (2) Ultrasonic cleaning shall comply with the following conditions, with avoiding the resonance phenomenon at the mounted products and P.C.B.
  - Power : 20W / l max.
  - Frequency : 28kHz to 40kHz
  - Time : 5 minutes max.
- (3) Cleaner
  1. Cleaner
    - Isopropyl alcohol (IPA)
  2. Aqueous agent
    - PINE ALPHA ST-100S
- (4) There shall be no residual flux and residual cleaner after cleaning.  
In the case of using aqueous agent, products shall be dried completely after rinse with de-ionized water in order to remove the cleaner.
- (5) Other cleaning  
Please contact us.

## 13.9. Operating Environment

Do not use this product under the following environmental conditions, on deterioration of the performance, such as insulation resistance may result from the use.

- (1) in the corrodible atmosphere (acidic gases, alkaline gases, chlorine, sulfur gases, organic gases and etc.)
- (2) in the atmosphere where liquid such as organic solvent, may splash on the products.

## 13.10. Resin coating

The capacitance value may change and/or it may affect on the product's performance due to high cure-stress of resin to be used for coating / molding products. So please pay your careful attention when you select resin. In prior to use, please make the reliability evaluation with the product mounted in your application set.

## 13.11. Handling of a substrate

After mounting products on a substrate, do not apply any stress to the product caused by bending or twisting to the substrate when cropping the substrate, inserting and removing a connector from the substrate or tightening screw to the substrate.

Excessive mechanical stress may cause cracking in the product.

## 13.12. Storage condition

- (1) Storage period  
Use the products within 12 months after delivered.  
Solderability should be checked if this period is exceeded.
- (2) Storage environment condition
  - Products should be stored in the warehouse on the following conditions.
    - Temperature: -10 to +40°C, Humidity: 15 to 85% relative humidity
    - No rapid change on temperature and humidity
  - Don't keep products in corrosive gases such as sulfur, chlorine gas or acid, or it may cause oxidization of electrode, resulting in poor solderability.
  - Products should be stored on the palette for the prevention of the influence from humidity, dust and so on.
  - Products should be stored in the warehouse without heat shock, vibration, direct sunlight and so on.
  - Products should be stored under the airtight packaged condition.
- (3) Delivery  
Care should be taken when transporting or handling product to avoid excessive vibration or mechanical shock.

## 14. Note

- (1) Please make sure that your product has been evaluated in view of your specifications with our product being mounted to your product.
- (2) You are requested not to use our product deviating from the reference specifications.
- (3) The contents of this reference specification are subject to change without advance notice. Please approve our product specifications or transact the approval sheet for product specifications before ordering.
